My system:

Introduction:

The historiography of the Roulette contemplates lots of anecdotal. Some of these are:

1) **The factorial total one of the Roulette makes... 666 (In fact, 37*36/2)=666 , and everyone knows who's the owner of such number.**
2) **It's narrated that from the back of the saio of the Jesuit father who for the first time introduced the "infernal machine" got out one ... tail!**
3) **Why - if it is true that is impossible to beat the roulette, is well known that exist one "rule" - unquestionable! - which with the managers are able to remove eventual "disliked" gamblers?**

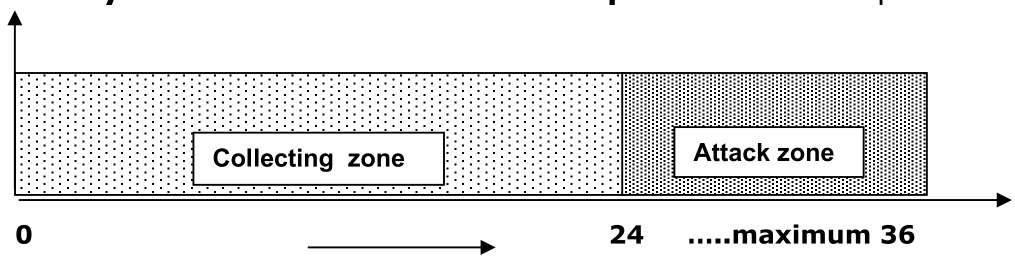

The main target in my research, during the last years, was to understand which was the criteria that with which the Jesuits placed the numbers in the roulette wheel.

At last I found a wheel distribution that eliminate the negative refuse.

Using this distribution I applied the statistics "law of the third" and found a system for 6-10 numbers.
I tested this system on thousands of spins, and I won ALL the games within the 11th spins (also if the mathematics delay of the system is calculated to be of 12th spins).

Procedure:

First you have to annotate on the special table 24 spins**.**

Then you have to cancel, all the numbers that will be drawn. Well, for effect of the Law of the Third, in the "Diagram of the Medium Refuse", after 24 spins, on average, only 17.83 numbers will be drawn. Well of these 18 numbers theoretically 9 would have to be present in the first line and the remaining 9 in the other one.
Bur, for the effect of the so-called the Gaussian deviation, this fair distribution very rarely will happen and therefore one of the two lines will nearly mark more and more sorties of the other one.

1) You have to identify the line where you have cancelled more numbers.

2) You have to bet on the numbers not cancelled in this line.

At this time you can follow 3 different way of betting.

- **I) Aggressive way**
- **II) Classic way**
- **III) Protective way**

It depends from your character.

I) Aggressive Way:

No conditions for betting the system:

This it the way that I usually use.
All the combinations are good ones.

I play in all the cases, also if both the lines have the some number of numbers cancelled (ex. 9-9, 8-8, etc...), making two different bet for the 2 lines, you can win two times in this case.

II) Classic Way:

These are the 3 conditions for betting the system:

1) Identify a line with more numbers cancelled than the other one
2) This line must to have from **8 up to 12** numbers cancelled.
3) We also need a difference of at least **2 numbers** between the two lines.

For example:
Line A 9 numbers cancelled Line B 11 numbers: the good line is the B
Line A 8 numbers cancelled Line B 12 numbers: the good line is the B
Line A 6 numbers cancelled Line B 8 numbers: the good line is the B
Line A 9 numbers cancelled Line B 10 numbers: no good lines (low difference)
Line A 9 numbers cancelled Line B 13 numbers: no good lines (to many numbers cancelled in the good lines)
Line A 5 numbers cancelled Line B 7 numbers: no good lines (to few numbers cancelled in the good lines)

On average you can play more than the 85% of the times.

III) Protective Way:

These are the 3 conditions for betting the system:

1) Identify a line with more numbers cancelled than the other one
2) This line must to have from **9 up to 11** numbers cancelled.
3) We also need a difference of at least **3 numbers** between the two lines.

For example:
Line A 9 numbers cancelled Line B 11 numbers: : no good lines (low difference)
Line A 8 numbers cancelled Line B 12 numbers: the good line is the B
Line A 6 numbers cancelled Line B 8 numbers: no good lines (low difference)
Line A 8 numbers cancelled Line B 10 numbers: no good lines (low difference)
Line A 9 numbers cancelled Line B 13 numbers: no good lines (to many numbers cancelled in the good lines)
Line A 5 numbers cancelled Line B 8 numbers: no good lines (to few numbers cancelled in the good lines)
Line A 9 numbers cancelled Line B 12 numbers: no good lines (to many numbers cancelled in the good lines)

You will play less times than in the other ways, but this way is the more protective way (for your bankroll) to attack the roulette.

Kind of attack (good for all the 3 ways of playing):

With this system I use a little progression, the progression depends from the number of the numbers that I will bet.

This is the theory table for the progression:
In all my tests during the last years I never arrived at 12th spins, just one time I arrived at the 11th spins (betting 6 numbers).
If you like to a flat bet you can use a flat bet for 4 spins.
On average the system win at the 2,6 spins, so you can win and beat the roulette without using a progression bet.
The choice is up to you, depends from your character.
The bank roll would be of 80 units for a flat bet, and 1000 or more units for a progression bet.

	Numbers to bet									
spins	6		7		8		9		10	
1	1	30	1	29	1	28	1	27	1	26
2	1	24	1	22	1	20	1	18	1	16
3	1	18	1	15	1	12	1	9	1	6
4	1	12	1	8	1	4	2	27	2	22
5	1	6	2	30	2	24	3	27	3	28
6	2	30	2	16	2	8	3	9	4	24
7	2	18	3	31	3	20	5	36	6	36
8	3	36	3	10	5	52	6	18	8	28
9	3	18	4	18	5	12	8	18	11	26
10	4	30	5	26	7	28	11	27	15	20
11	5	36	6	13	9	28	15	36	21	26
12	6	36	8	29	12	40	20	36	30	50

In the first column we can read the numbers of units to bet (1,1,1,1,2,2,3…) and in the second column the relative numbers of units won (30,24,18,12 …)

Table of game:

Line A
1
2
4
5

22
23
26
27
28
29
30
35
36

These example are done using the numbers you sent me, I used the aggressive way and a little progressive bet as in the previous table.

Example 1:

18, 9, 21, 35, 00, 2, 20, 16, 33, 11, 10, 35, 28, 33, 10, 32, 29, 33, 31, 2, 30, 24, 20, 7,

Line A	Line B
1	3
2	6
4	7
5	8
9	10
14	11
15	12
16	13
17	18
19	22
20	23
21	26
24	27
25	28
31	29
32	30
33	35
34	36

The Line A has 9 numbers cancelled, the line B 8 numbers.
You Must bet on the remaining 9 numbers in the Line A (1,4,5,14,15,17,19,25,34)
As you can see you win at the first spin. . . . number 4

Example 2:

Let's continue with other 24 spins:

12, 8, 15, 22, 12, 00, 10, 26, 8, 16, 00, 26, 29, 7, 26, 12, 28, 9, 24, 17, 5, 26, 26, 0

23
26
27
28
29
30
35
36

Line A 6 numbers cancelled, Line B 8 numbers, the good line is the Line B
You will bet on 3,6,11,13,18,23,27,30,35,36 (10 numbers).
Next spins are: 28, 34, 31, 11 WIN
As you can see in this case you win at the 4th spins, betting 2 units per numbers (I used the progression ad in table

Example 3:

Let's continue with other 24 spins:
34, 31, 11, 34, 28, 29, 30, 32, 2, 21, 36, 28, 1, 34, 5, 24, 13, 20,12, 0, 1, 27, 36, 35,

26
27
28
29
30
35
36

Line A 9 numbers cancelled, Line B 9 numbers, both the lines are good line
You will bet on 4,9,14,15,16,17,19,25,33 for the Line A and 3,6,7,8,10,18,22,23,26 for Line B.
Next spins are: 0, 25 win with Line A, 23 Win Line B.
As you can see in this case you win at the 2nd and at the 3rd spins.

My system:

Introduction:

The historiography of the Roulette contemplates lots of anecdotal. Some of these are:

4) **The factorial total one of the Roulette makes... 666 (In fact, 37*36/2)=666 , and everyone knows who's the owner of such number.**

5) **It's narrated that from the back of the saio of the Jesuit father who for the first time introduced the "infernal machine" got out one … tail!**
6) **Why - if it is true that is impossible to beat the roulette, is well known that exist one "rule" - unquestionable! - which with the managers are able to remove eventual "disliked" gamblers?**

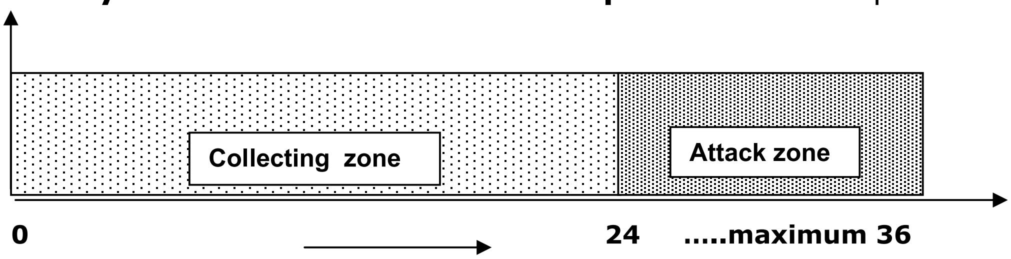

The main target in my research, during the last years, was to understand which was the criteria that with which the Jesuits placed the numbers in the roulette wheel.

At last I found a wheel distribution that eliminate the negative refuse.

Using this distribution I applied the statistics "law of the third" and found a system for 6-10 numbers.
I tested this system on thousands of spins, and I won ALL the games within the 11th spins (also if the mathematics delay of the system is calculated to be of 12th spins).

Procedure:

First you have to annotate on the special table 24 spins**.**

Then you have to cancel, all the numbers that will be drawn. Well, for effect of the Law of the Third, in the "Diagram of the Medium Refuse", after 24 spins, on average, only 17.83 numbers will be drawn. Well of these 18 numbers theoretically 9 would have to be present in the first line and the remaining 9 in the other one.
Bur, for the effect of the so-called the Gaussian deviation, this fair distribution very rarely will happen and therefore one of the two lines will nearly mark more and more sorties of the other one.

1) You have to identify the line where you have cancelled more numbers.

2) You have to bet on the numbers not cancelled in this line.

At this time you can follow 3 different way of betting.

- **I) Aggressive way**
- **II) Classic way**
- **III) Protective way**

It depends from your character.

II) Aggressive Way:

No conditions for betting the system:

This it the way that I usually use.
All the combinations are good ones.

I play in all the cases, also if both the lines have the some number of numbers cancelled (ex. 9-9, 8-8, etc…), making two different bet for the 2 lines, you can win two times in this case.

II) Classic Way:

These are the 3 conditions for betting the system:

1) Identify a line with more numbers cancelled than the other one
2) This line must to have from **8 up to 12** numbers cancelled.
3) We also need a difference of at least **2 numbers** between the two lines.

For example:
Line A 9 numbers cancelled Line B 11 numbers: the good line is the B
Line A 8 numbers cancelled Line B 12 numbers: the good line is the B
Line A 6 numbers cancelled Line B 8 numbers: the good line is the B
Line A 9 numbers cancelled Line B 10 numbers: no good lines (low difference)
Line A 9 numbers cancelled Line B 13 numbers: no good lines (to many numbers cancelled in the good lines)
Line A 5 numbers cancelled Line B 7 numbers: no good lines (to few numbers cancelled in the good lines)

On average you can play more than the 85% of the times.

III) Protective Way:

These are the 3 conditions for betting the system:

1) Identify a line with more numbers cancelled than the other one
2) This line must to have from **9 up to 11** numbers cancelled.
3) We also need a difference of at least **3 numbers** between the two lines.

For example:
Line A 9 numbers cancelled Line B 11 numbers: : no good lines (low difference)
Line A 8 numbers cancelled Line B 12 numbers: the good line is the B
Line A 6 numbers cancelled Line B 8 numbers: no good lines (low difference)
Line A 8 numbers cancelled Line B 10 numbers: no good lines (low difference)
Line A 9 numbers cancelled Line B 13 numbers: no good lines (to many numbers cancelled in the good lines)
Line A 5 numbers cancelled Line B 8 numbers: no good lines (to few numbers cancelled in the good lines)
Line A 9 numbers cancelled Line B 12 numbers: no good lines (to many numbers cancelled in the good lines)

You will play less times than in the other ways, but this way is the more protective way (for your bankroll) to attack the roulette.

Kind of attack (good for all the 3 ways of playing):

With this system I use a little progression, the progression depends from the number of the numbers that I will bet.

This is the theory table for the progression:
In all my tests during the last years I never arrived at 12th spins, just one time I arrived at the 11th spins (betting 6 numbers).
If you like to a flat bet you can use a flat bet for 4 spins.
On average the system win at the 2,6 spins, so you can win and beat the roulette without using a progression bet.
The choice is up to you, depends from your character.
The bank roll would be of 80 units for a flat bet, and 1000 or more units for a progression bet.
